

OPTIMIZE THE VALUE OF YOUR NEW SYSTEM

An end-to-end data management solution: As healthcare organizations migrate, consolidate, or replace systems, Keena delivers a comprehensive data strategy that supports both short-term transitions and long-term access.

Enterprise Master Patient Index

Eliminate duplicate patient records and maintain consistent demographics across EHR and PM systems.

Data Migration Services

Convert and migrate EHR and PM data into your new system.

Archival Records

Archive and access historical patient records without maintaining legacy systems.

Records Release

Enable fast, compliant access to patient records for care, audits, and disclosures.

Keena Conversion Services

Personalized EHR Optimization That Works for You

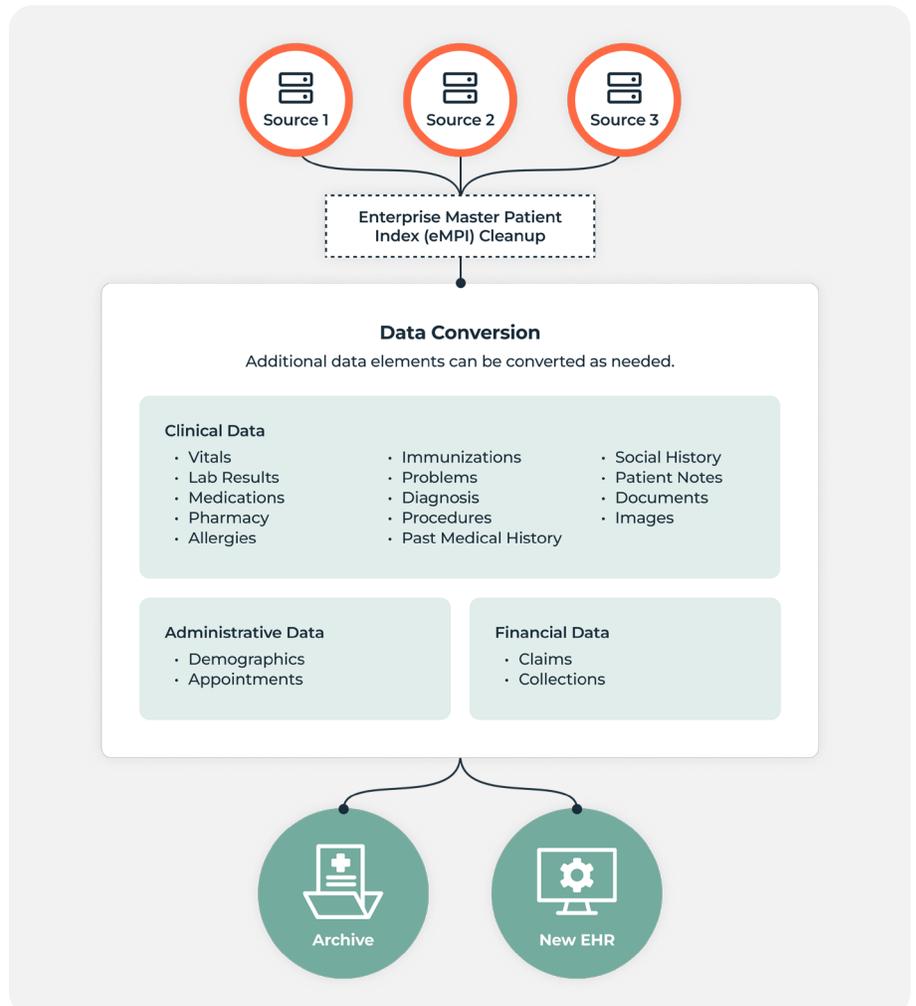

Seamless EHR Data Conversion & Continuity of Care

Keena is an industry leader in performing thorough and efficient data conversions. We partner closely with key stakeholders to make sure your EHR conversion and data migration project is a success, so your team can focus on maintaining continuity of care and minimizing disruption.

Accurate and Efficient Healthcare Data Conversions

Our conversion solutions team works with all of your existing patient data to convert, migrate, and then provide easy access to current and archived patient information. We leverage advanced technology, maintain strong relationships with leading EHR/PM vendors, and utilize our extensive conversion library to support faster system go-live timelines while maintaining accuracy and controlling costs.

With hundreds of conversions completed across nearly every EHR platform, our time-tested approach guarantees the best result for your new EHR and your practice.

OUR EHR CONVERSION EXPERIENCE

550+

Data extraction and conversion projects

75+

Leading EHR and PM platforms converted

300M+

Combined healthcare charts converted

Conversion Best Practices

Convert What You Need, Archive the Rest

Running conversion and archival projects in parallel saves time and cost.

KeenaArchive integrates seamlessly with existing workflows, so staff can use a single sign-on to search, filter, organize, and interact with all of your archived clinical and financial information. This innovative archival solution will immediately improve your practice workflow. Think of it as a mini EHR or PM for archived data without the cost or complexity of legacy systems.

eMPI Solution: Clean Patient Data Before Conversion

Accurate and consistent patient records are foundational for a successful EHR conversion. Keena's Enterprise Master Patient Index (eMPI) software eliminates duplicate patient records and maintains consistent demographic data across multiple registration systems.

Before migration, we assess the true scope of patient duplication within your EHR or PM environment. Our pre-conversion analysis identifies issues such as:

- Name and identifier variations
- Address and formatting inconsistencies
- Missing or incomplete demographic fields

Through our advanced cleanup and validation process, we deliver a clean and connected dataset that supports efficient workflows, reliable reporting, and safer patient care from day one.

Conversion Decisions & Outcomes

Limit Conversion Scope	Fix Patient Record Issues First	Standardize Patient Data Pre-Migration
<p>Lower conversion cost and timeline</p> <p>Reduced project risk and complexity</p> <p>Archived legacy data remains searchable via SSO</p> <p>Lightweight EHR-like access without maintaining legacy systems</p>	<p>Duplicate patient records resolved pre-migration</p> <p>Accurate and unified patient histories</p> <p>Fewer errors and reconciliation efforts after go-live</p>	<p>Clean, validated demographic data</p> <p>Smoother system loading and workflows</p> <p>Reliable reporting from day one</p> <p>Improved patient safety</p>

BEST OF KLAS

In recognition of our achievements, Keena was ranked among the top-scoring vendors for Technical and Conversion Services in the 2024 Best in KLAS Awards: Software & Services Report.
