"It was a pleasure working again with Keena on this complicated, mission critical archival project. Our organizations were able to quickly collaborate on a parallel system fast-track implementation plan and archived several large acute and ambulatory care information systems quickly and accurately.

As a result, we've saved a great deal of time and money by sunsetting expensive and ineffective legacy systems and have replaced them with an integrated, interoperable database with easy access to the critical clinical and financial information we need to make informed strategic decisions daily."
