

FEATURES

- Single Sign-On
- User-Defined Roles by Admin
- Intuitive Use Dashboard
- Full Search Functionality
- Platform Agnostic Central Database
- Integrates with Most EHR / PM Systems
- Discrete Data

BENEFITS

Cost Effective

Reduce archival costs, no licensing or per-user fees, all data is in one database. No more pricey legacy systems.

Low Maintenance

Web-based application eliminates need for on-site servers, software and maintenance.

Interoperability

Improves workflow by making archival data available in a single click.

Billing From Archives

Continue collection activity by billing directly from archived patient records.

Flexible Yet Compliant

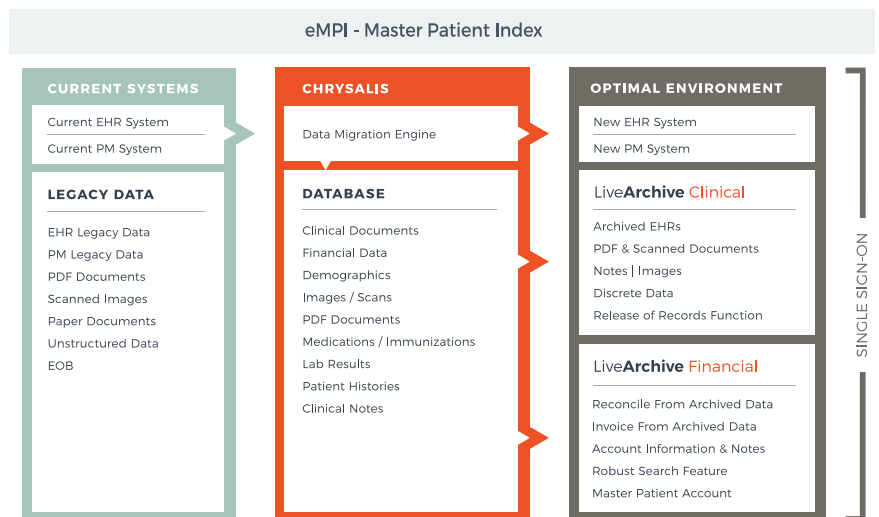

Stay compliant and maintain easy access to all your archived healthcare data.

Quick Release

Search, compile and distribute patient records quickly and easily.

Interoperability for Healthcare Archives

LiveArchive is an integrated suite of healthcare archival applications. Providers and staff access and interact with all of your archived clinical and financial information through an intuitive dashboard stored in a platform-agnostic data warehouse. With the dashboard, users are able to search, filter, organize, compile, output and interact with all archived clinical and financial data. LiveArchive aggregates all data into one centralized location, keeping your practice in compliance while improving your organization's efficiency by giving access to your team. It's like having a mini EHR attached to your archive data, without the licensing, hassle or expense of your old system.

LiveArchive Clinical

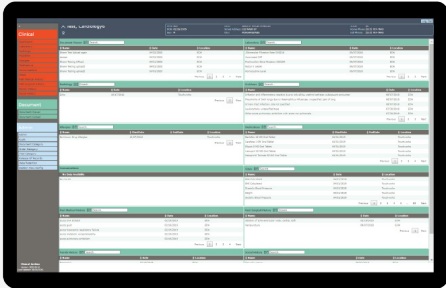

Archive clinical data from one or multiple Electronic Health Record systems into a single data warehouse. The LiveArchive database provides storage, display, and reporting capabilities for discrete data such as population health, meaningful use, compliance and MSSP reporting. Easily search and retrieve archived documents for reference, compliance and release of records.

LiveArchive Financial

Once your legacy financial data is moved to LiveArchive, you can resume invoicing and managing collections from your financial archive.

LiveArchive

It's like having a mini EHR attached to your archival data.

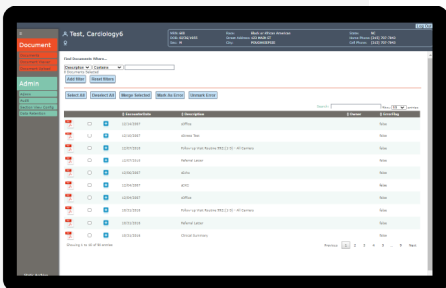

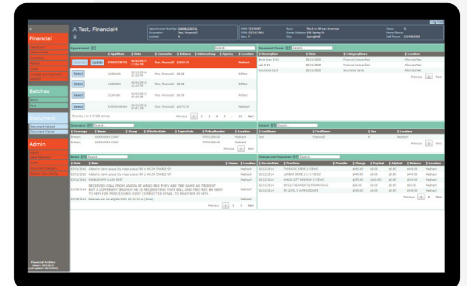

LiveArchive Clinical

LiveArchive Clinical is a unique healthcare data archive solution. This web-based application provides clinical staff instant access to data from one or multiple clinical legacy systems. The interactive dashboard provides an intuitive interface to easily search and select the desired patient view and clinical details. Intelligent auto-fill search lets the user search by any field including Name, EMPI or DOB automatically returning a list of matching patients. Selecting a patient record returns preview panels with results, vitals, meds, and allergies as well as related documents. Users can click into each preview panel to get more detail, print or merge information into a PDF. LiveArchive functions as a stand-alone module or integrate into your existing PM system. Now you can archive clinical data for recordkeeping and compliance, while improving practice interoperability and workflow.

LiveArchive Financial

LiveArchive Financial is designed to allow staff to access and interact with legacy financial healthcare records for billing, collections and historical record keeping. An interactive dashboard with permission-based roles offers access to patient records, account information, charges & payments, notes, and insurances. This solution accepts patient data from all of your old financial systems and stores it in a platform-agnostic data warehouse, making all information available at the click of a mouse. LiveArchive Financial ensures that your financial office can continue to bill patients from legacy systems without the expense and effort of maintaining old systems. Store critical patient financial data, maintain cash flow and revenue potential, while remaining compliant with HIPAA, HITECH, and other regulations.

LiveArchive Static

If you don't need all of the functionality of LiveArchive, StaticArchive is an excellent way to archive an EHR for reference, compliance and release of records. All records from your EHR are converted into static PDF files and are searchable within the StaticArchive database.
